Abstract :-				
The rapid growth of e-commerce has enabled global access to products, but artists and small creators still struggle to find an affordable, dedicated platform for showcasing and selling their artwork. Many rely on social media or general marketplaces, which lack specialized features for promoting artistic creations and connecting artists directly with buyers. ARTKART is a web-based application designed to serve as an online marketplace exclusively for artists and art enthusiasts. The primary aim of this project is to provide a user-friendly platform where artists can upload, manage, and sell their artwork, while customers can explore, purchase, and support creators seamlessly. The system is developed using HTML, CSS, JavaScript, and Python, with a backend database for user management, artwork cataloging, and secure transactions. The methodology includes user authentication, product listing modules, payment gateway integration, and personalized recommendation features. Initial results of prototype testing indicate improved accessibility for artists, simplified purchase flows for customers, and strong potential to expand into a scalable online marketplace. In conclusion, ARTKART addresses the gap between talented artists and potential buyers by providing a specialized, cost-effective digital platform. It not only empowers local and emerging artists to showcase their work but also enhances customer experience through organized browsing and secure transactions. This project contributes to promoting art in the digital age by combining technology and creativity into a single solution.
